

# Togo dossier summary

*Water, climate, fertilisers and crops. The essentials of the 25-page dossier.*

## Key figures

| Figure | What it means |
|---|---|
| **+1,074 t** | Of extra maize per 10,000 ha treated, central scenario (537 to 2,148 t depending on the scenario). |
| **+570 t** | Of extra soybean per 10,000 ha treated, central scenario. |
| **804 000 ha** | Of maize harvested in 2024, the main crop; 282 000 ha of soybean. |
| **7,860 ha** | Only equipped for irrigation (FAOSTAT): Almost every harvest depends on rain. |
| **11.7 Mm³** | Irrigation water saved per year in the central scenario, enough to irrigate about 1,214 more ha. |
| **226 000 ha** | Of certified organic cropland in 2025 (FAOSTAT): ECOFERT® is EU Bio certified. |
| **33,664 t** | Mineral nitrogen used in 2024, all imported. |

*M = million · Mm³ = million cubic metres · t = tonnes. The gains are scenarios built from the trials cited; no trial has yet been conducted in Togo.*

## Our products

Green Solutions develops products for water, fertilisation and crop protection. Four families are of interest to this dossier.

| Product | Claimed use | Published evidence (level) |
|---|---|---|
| **EVERGREEN® (water-retention polymer)** | Holds rain water as a gel, near the roots. | Trials on maize, potato, watermelon, date palm and soybean. Level B to C. |
| **ECOSORB® (water-retention polymer based on corn starch)** | Same use; lasting 2 to 3 years according to the website. | Soybean trial (China); laboratory acrylamide analysis. Level B to C. |
| **ECOFERT® (fertiliser)** | Fertiliser certified by SOHISCERT and EU Bio, usable in organic farming. | Published certificate; potato trial with EVERGREEN®. Levels A and C. |
| **Paulownia ALTIFOLIA®** | Fast-growing tree for agroforestry. | Website figures; no trial in Togo. Level C. |

## Key points

- **A rain-fed agriculture.** 7,860 ha equipped for irrigation: The main stake is to keep the water of each rain near the roots.
- **Water is short between two rains.** National water stress is only 3.4%, but Dapaong gets 738 mm of rain for 2,010 mm of evapotranspiration.
- **Maize and soybean first.** They are the two crops where a published trial makes it possible to quantify a yield gain.
- **An organic chain already in place.** 225,720 ha certified organic, mostly for soybean.
- **Importing into Togo.** 5% customs duty (ECOWAS tariff), 2.5% of levies in total, 18% VAT; fertiliser registration under Regulation C/REG.13/12/12.

## The regions at a glance

| Region (city) | Rainfall (mm/yr) | Deficit (mm/yr) | Temperature (°C) |
|---|---|---|---|
| Maritime (Lomé) | 1,010 | 448 | 26.7 |
| Plateaux, west (Kpalimé) | 1,517 | -147 | 26.1 |
| Plateaux, east (Atakpamé) | 1,140 | 355 | 25.9 |
| Centrale (Sokodé) | 1,514 | 92 | 26.1 |
| Kara (Kara) | 1,357 | 329 | 26.7 |
| Savanes (Dapaong) | 738 | 1,272 | 27.8 |

## How to read the figures

Each figure refers to a source with a confidence level. A: Official statistics or international database (World Bank, FAO, ECOWAS). B: Research institute, laboratory or public body outside statistics. C: Manufacturer statement, website, press or estimate. The sources are listed in Annex A of the dossier.

## Extra production per 10,000 ha treated

| Crop | Average yield (t/ha) | Cautious (t) | Central (t) | High (t) |
|---|---|---|---|---|
| Maize | 1.26 | 537 | 1,074 | 2,148 |
| Soybean | 1.01 | 285 | 570 | 1,141 |

## Trade

- **First products exported.** Cocoa ($88 million), soybean cake and cotton lint, out of $466 million of agricultural exports in 2024.
- **Main imports.** Palm oil, rice ($74 million), sugar and wheat, out of $467 million of agricultural imports.
